RE: Letter of Intent - Waste Management (WM) of Maine - Norridgewock, ME

Waste Management (WM) of Maine Inc. in Norridgewock Maine, at Crossroads Landfill, can manage the waste streams listed below. WM can manage this waste even as your projected volumes increase into the future. We have capacity through December 2024 at present fill rates and are presently going through the landfill expansion process with the state of Maine for additional capacity beyond the 2024 date.

Landfilling of Solid Waste at Norridgewock, ME – a.) Waste can't contain free liquids (pass paint filter test for solids) and b.) Waste can't be odoriferous. WM can work with Nordic Aquafarms to manage this waste accordingly. Special waste acceptance at WM-Norridgewock is based on WM approval of a waste characterization form (attached).

- 1. Solids (mortalities, fish heads, bones, skin, viscera, etc.)**  
Volume: 10,600 metric tons/year
  
- 2. Sludge (filtrate removed from water treatment system, high in organics and nutrients)**  
Volume: 6,000 metric tons/year (prior to stabilization)
  
- 3. Excess Soil - Soil from the Belfast Greenfield Site can be beneficially reused as landfill cover**  
Volume: 10,000 tons / event

If you have any questions, please do not hesitate to call. Thank you.

Sincerely,
